Modern Aladdin's Lamps

The average man and woman realize that the world is making progress at an accelerated pace. That in the space of a few brief years, improvements and more wonderful inventions are made to add to the comfort and pleasure of life than were recorded in many centuries of the past. Today there is a time when, people receive news of any great innovation with extreme skepticism, and retained the idea of such things being possible. Today the world is prepared to accept almost anything as possible.

However, it is the occurrence of some monetary which actually forces upon a realization of just how great and how rapid is the progress being made by the human race. Such an anniversary came last October when Houghton was paid to Thomas A. Edison, the inventor of the golden pillars of what is generally accepted as being the greatest of his many great inventions, the incandescent lamp.

The tale of Aladdin and his wonderful lamp has delighted readers, youthful and adult, for many generations, but the accomplishments of man, the greatest of which is Edison's invention of the incandescent lamp, and the series of amazing inventions since then, all of which have been directly connected with Edison's discovery, in many respects surpass the great vivid imaginings of the Arabian Nights.

In this age of electricity, with our streets, houses and places of business lit by the invisible current, our machinery operated by it, our homes heated by it, with every conceivable use of the electric light, it is with us as the agent to flash our news and messages around the world, and because of which we are enabled to take our news and the news of the world, and the series of amazing inventions since then, all of which have been directly connected with Edison's discovery, in many respects surpass the great vivid imaginings of the Arabian Nights.

Had Edison, the wizard of Menlo Park, not succeeded in his effort to produce the incandescent lamp, would the world today enjoy all the pleasure and comfort of the electric light, which has been added to the world? Would the light giving rays of the quartz lamp be conferring benefits upon Africa's humanity. No. To Thomas A. Edison's lamp is forever due for his great contribution to the world's welfare and the world's wealth. Fifty years' not equal to the average span of a man's life. Yet Edison within that space of time has given us not only the incandescent lamp and all the wonders of electricity, but he has also given us the electric refrigerator, the human voice upon a cylinder of wax, thus giving us the means of preserving life. It is that which has made the difference between the life in which people were as they do in actual life, an invention that is profoundly affecting the life and thought of the world. And now we have the means of the relief of suffering, the relief of suffering, the relief of suffering.

Within an even shorter space of time the automobile has not only been brought to its present state of efficiency, but it has been added to all over the world, completely revolutionizing our manner of living and our manner of traveling, and it has been added to the world's wealth.

These new messages winging their speedy way from city to city carrying passengers, mail and express.

Investment in this conferring upon this generation new power and new facilities of power, greater opportunities for pleasure and profit, or, in short, greater possibilities for happiness, and all the power now being placed rapidly under his control, man must continue to move higher in intelligence and in all those moral attributes which alone will make him fully capable of enjoying the fullness of the life that is before him, and the number and variety of which increases almost hourly. For it must be remembered that in the final analysis the use of abuse, the deriving more of the suffering of evil, and the use of the power of the power, the achievement, depends upon his mind and the attitude he takes toward life and all its realities and possibilities.

All-Rail Air Route

Empire Communication
Expected Soon

An all-rail route around the world is now a strong possibility, according to a report from the United States. The route, which would be controlled by the United States, would be a great improvement on the present route, which is controlled by the British Empire. The route would be a great improvement on the present route, which is controlled by the British Empire. The route would be a great improvement on the present route, which is controlled by the British Empire.

Effect Of Sunlight On Dairy Products

Particularly Detrimental On Milk, Cream and Butter, Says Author

Dr. E. G. Graham, of the Division of Dairy Research, of the Federal Department of Agriculture, states that in a recent investigation he has found that direct sunlight has a very marked effect on the flavor of dairy products, particularly on milk, cream and butter. The effect is most marked on milk, which is found to be much less palatable when exposed to direct sunlight than when it is kept in the dark. The effect is also marked on cream and butter, which are found to be much less palatable when exposed to direct sunlight than when they are kept in the dark. The effect is most marked on milk, which is found to be much less palatable when exposed to direct sunlight than when it is kept in the dark. The effect is also marked on cream and butter, which are found to be much less palatable when exposed to direct sunlight than when they are kept in the dark.

Subject To Change

Dr. Hood states that if consumers and the public are not satisfied with the quality of the product, the subject will be changed.

South Africa Baring Certified Seed Potatoes

Varities Sent From Canada Last Year Gave Good Results

Trade with South Africa in certified seed potatoes from Canada is being promoted—another tribute to the excellence of our crops. Last year, the British Columbia Seed Potato Commission sent a quantity of certified seed potatoes to South Africa, from Eastern Canada. They arrived in Cape Town in excellent condition, and gave good results.

Recipes For This Week

WILD WEST RELISH

1 pound sweet corn picked select
1 pound pulled raisins
1 small onion, minced.
1 ounce stick cinnamon.
2 eggs broken up.
5 ounce celery seed.
Vinegar to cover.

Place all ingredients, except celery seed, in a porcelain lined crock, and mix with vinegar and onion pulp. Cover with a moderate heat. When cold remove cinnamon, and celery seed, put in sterilized jars and seal. This relish is very good, and is a good recipe for this week.

RED BEANS AND RICE

(A Famous Creole Combination)
1 pound dried beans
1 teaspoon salt
1 teaspoon butter
1 small onion, minced.
1 ounce stick cinnamon.
2 eggs broken up.
5 ounce celery seed.
Vinegar to cover.

Soak the beans overnight, or for at least six hours. Then simmer for four hours or more in salt water. Add the onion, salt, and butter. Cook for one hour. Add the cinnamon, eggs, and celery seed. Cook for one hour. Add the vinegar. Cook for one hour.

In Memory Of Colonel McCant

Old Tree From Georgia Planted On McGill College Grounds

During Armistice Day a two-year-old tree was planted on the McGill campus, at Montreal, in memory of John McCant, author of "The Plankers' Plank." Different Silages For Dairy Cows

Substitute For Sunflower Silage I
Mixture Of Oats, Peas and
Vetches

In northern sections where corn for silage can not be grown successfully either of two crops may be used as a substitute. Silage from a mixture of oats, peas, and vetches seems to give results about equal to sunflower silage for feeding dairy cows. These two crops were compared

The superintendent in his report for the year 1927, published by the Dominion Department of Agriculture, states that the experiment was carried on to determine the relative value of the two silages for milk production. Ten milking cows were selected which were in such stage of lactation that each would continue milking throughout the following four thirty-day periods which the experiment covered. During this period the silage fed was interchanged from month to month and accurate records kept. This experiment has been conducted yearly for five years. For the first three years each animal was fed five pounds per day more sunflower silage than oats, peas, and vetch or

The dry matter as between the two kinds of silage. During the later two years the quantity of sunflower silage given was reduced, so that the cattle consumed equal quantities of each silage. Besides the silage ration, each cow received twelve pounds of hay per day, and six received in addition twenty pounds of roots per day. The grain mixture consisted of

During the five-year period the average daily production of milk was

lower silage, and 24.52 lbs. for the cows on the oats, peas, and vetch silage, while the cost of feed per 100 lbs. of milk produced was \$1.63 and

0.75 respectively, showing that these two crops are very similar in in feeding value, what little advantage there is lying with the sunflower silage.

Winter Egg Production

Value Of Beef Scrap and Buttermilk For Poultry Is Compared

In the feeding of poultry at the

Lacombe, Alberta, Experimental Station, buttermilk and beef scrap were compared as a source of animal protein for winter egg production. Fens of white Wyandotte pullets were used in the experiment, which lasted from

beginning of November until the end of the following April. Except for milk given to one lot and beef scrap to the other, the ration was the same with the different pens. At the end of the experiment it was found the pens given beef scrap produced slightly better results than

The report of the superintendent of the station, published by the Depart-

ment of Agriculture, at Ottawa, gives the result of many other experiments in the feeding of poultry and in the other investigations and activities being carried on at the Central Alberta Station.

Paper was first made in Canada about 100 years ago, but prior to 1860 no wood-pulp was used in its manufacture, rags being the chief raw-material.

"The woman pays and pays and pays!" screamed the feminist orator. "Good," remarked a weary voice from the rear, "that's three instalments settled."

The Finis are the most omnivorous readers in Europe, and, like the thesenas of Paul's day, are the lions of their epoch.

Beware of the man who looks like near-genius.

Victoria, Australia, plans to spend 5,000,000 in building houses.

There is no such thing as an "easy payment" on a car you cannot afford.
